U800 Series Hisense Roku TV

Model 75U800GR

8K ULED

The next generation of TV

This one's for the trail-blazers. 8K is the future of TV today. Combined with Roku, America's #1 TV streaming platform*, this is the ultimate entertainment powerhouse. The U800GR has four times the pixels of 4K, and detail and definition is clearer than ever. In the U800GR, the 8K upscaler takes non-8K content and boosts it to near-8K quality. Making 4K, 1080p, and 720p, content look sharper than you have ever seen it. See detail you may have missed, like where your favorite reality star had botox. And that detail gets an even bigger makeover with Quantum Dot Color, 120Hz native panel with 480 motion rate and up to 1000 nits peak brightness making HDR pop. For gamers, we added Auto Low Latency Mode and Variable Refresh Rate, for fluid play with no lag and easier frags.

Stream a massive selection of free, live, and premium TV. The customizable home screen puts you a click away from your favorite channels, inputs, live TV, and free entertainment. Enjoy easy voice control with Siri, Alexa, or Hey Google or use the rechargeable voice remote with lost remote finder and personal shortcut buttons. About the only thing it can't do is make you a sandwich. But we're working on that.

8K ULED™

8K. Sounds twice as good as 4K, right? It actually has four times more depth and clarity thanks to its 33 million pixels. That's TV math for you. Pictures so good even simple sums don't add up. Luckily, what you see on screen makes perfect sense. The usual response is 'whoa that's realistic!'

Quantum Dot Color

See over one billion shades. Quantum Dot produces purer, richer, more brilliant and accurate colors than a regular LCD TV. We could get into the science. But it's a lot easier to say it makes every day look like the 4th of July.

Peak Brightness/Full Array Local Dimming Zones

Let's start with the science. Screen brightness is measured in nits. One nit is the same brightness as one candle. So the higher the nit rating, the brighter the screen. The average TV is 250-350 nits. Anything over 500 nits is extremely good. This is up to 1000 nits peak brightness across 180 local dimming zones. You get the picture. A picture that's brighter and perfectly lit in any light condition.

Ultra Motion and 120Hz Native refresh rate

Ultra Motion removes the digital 'noise' that can affect moving objects. Whether it's a bird, a plane or the man of steel, everything you see is real clear. Blurred lines? Not on this TV, the 120Hz native refresh rate means smoother gaming with pictures that keep up with your play.

Dolby Vision™ • Dolby Atmos®

Dolby Vision HDR picture and Dolby Atmos sound are cinema technologies for your home. They provide amazing realism you can see and hear in every scene.

Auto Low Latency Game Mode

Made for the latest generation of consoles. Game Mode kills input lag, so your controller commands are virtually instant on screen. And Variable Refresh Rate delivers smooth, fluid play by eliminating jitters and frame tearing.

Hi-View Engine

The Hi-View Engine processes the picture you see on screen. While you're busy watching, it's busy continually adjusting the settings for things like shadows and brightness. So, you always see the best possible picture. In fact, the technology fine-tunes each frame down to the pixel. The result is a beautiful, precise image and clear motion that you can only enjoy on Hisense ULED TVs.

Smart OS - Roku TV™

Roku TV makes it easy to watch what you love with all your favorite entertainment in one place. Access your cable, satellite service, and HDTV antenna, or start streaming live and on-demand TV from thousands of channels. Easily discover and enjoy in-season shows, live news, movies, kids' entertainment, and more for free. Enjoy features like cross-channel search, compatibility with popular voice assistants, and automatic software updates, plus voice control and private listening on the free Roku mobile app.

Roku Voice Remote Pro

Enjoy one-touch control with personal shortcut buttons, lost remote finder, private listening with connected headphones (sold separately), and a rechargeable battery. Plus, use hands-free voice commands to play entertainment, control your streaming, and power up your TV.

Works with Popular Voice Assistants**

Ask your Alexa or Google Assistant to launch channels, search for entertainment, control your streaming, and more. You can also control your TV using the Apple Home app or Siri on your Apple devices.
